

## **Libios announces the launch of Fianovis, an autonomous biotechnology laboratory dedicated to R&D, production and international commercialization of high-value analytical solutions for food and feed safety.**

Building on the international success of its C13 fully labeled Mycotoxin standards, Libios is thrilled to announce the launch of Fianovis, an autonomous entity that will now be devoted to R&D, production and international commercialization of innovative, high-value analytical solutions. This strategic move reflects Boutros Kerbaje commitment to innovation, growth and value delivery to its ecosystem.

Designer of customized solutions, co-constructed with the most innovative stakeholders in the market, Fianovis will leverage the collective expertise and industry knowledge of Libios, while having the autonomy to innovate and adapt to evolving market demands. Fianovis will operate as an independent entity, so as to respond swiftly to industry changes, make agile decisions and capture emerging possibilities.

« With the growing success of our C13 fully labeled Mycotoxin standards, Libios needed to optimize its operations and focus on core competencies » said Boutros Kerbaje, Libios and Fianovis CEO, « The creation of Fianovis will streamline our efforts and allow to allocate resources effectively, enhance operational efficiencies and provide specialized services to our valued customers ».

Fianovis will be led by Boutros Kerbaje, accompanied by Jean-Michel Henry, the Quality and Manufacturing process Director, an accomplished expert with more than 25 years of experience in quality control and certification for food and feed applications.

“ Mycotoxins are toxic substances produced by fungi that can contaminate food and feed” precises Jean-Michel Henry” “analyzing and quantifying mycotoxins in samples is crucial for assessing food safety. C13 fully labeled mycotoxin standards provide accurate quantification by serving as internal standards. This allows precise determination of mycotoxin levels in samples, compensating for any variations during sample preparation and analysis”

As part of this transition, Fianovis will assume the full responsibility for Mycotoxins standards R&D, production and commercialization, effective from the 1st of June. Customers and partners can expect a seamless transition with uninterrupted services and a continued commitment to qualitative and reliable solutions. Libios remains fully dedicated to its core mission : distributing dynamic test

kits for R&D and quality control. It will continue to provide its existing range of products, exclusively in France.

"By establishing Fianovis, we are embracing a strategic initiative that will transform our business landscape," said Fianovis CEO, Boutros kerbaje. "This move reinforces our commitment to delivering exceptional solutions to our customers, while empowering our teams to excel in their respective areas. We are confident that Fianovis will play a crucial role in driving our growth and success."
